Links and prototypes

Namma Space | Team TM-C2093A5006E
Organized master document - incomplete review draft

Code repository

https://github.com/BENi-Aditya/Namma-Space
Use the final published revision referenced in the verification record. Setup: README.md and docs/REPRODUCTION.md. Reviewed source sample must accompany the submitted test/data directory.

Proof of concept and web viewer

MISSING: publicly accessible HTTPS viewer URL.
The current localhost preview is not an acceptable remote demo link. Deploy output/site, test it while signed out on a second device, then replace this section with the actual working URL. Demonstrate WASD and mouse free roaming without installing software.

Demonstration video

MISSING: final 3-5 minute demonstration.
The storyboard is prepared, but no final narrated video is claimed. Include the actual capture process and an indoor web walkthrough. Place the final video inside the Round 1 Drive folder; add a link here only if using an additional video host.

Model and sample distribution

Large local artifacts are not included through ordinary Git. Provide a reviewed model archive and sample capture, clear ownership/contributor rights, and preserve the paths and hashes in test/assets.json. Current sample audio/interior sharing has not been reviewed for public release.

Final access checks

Replace missing sections before submission. Put the completed abstract, this master document, the video and code/sample materials in one organized Google Drive folder. Set view access to anyone with the link, verify signed-out access, and submit the folder URL through the Techfest portal. No final submission or permission check has been performed.
